Lambert

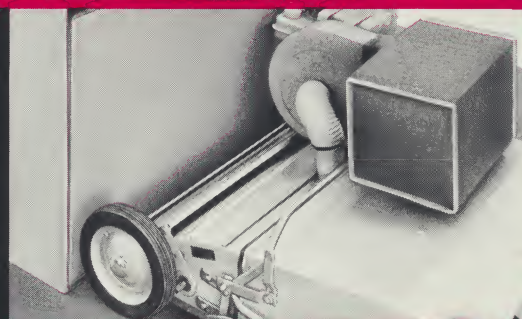

**BATTERY
MODELS**

LAMBERT Battery Powersweepers are available in self-propelled and trailer models. With the self-propelled model you just lower the handle and the sweeper moves forward under its own power... you walk along behind it! Raise the handle for complete free wheeling... tremendous maneuverability in tight corners (the sweeper turns in its own length!). The 24 volt electric motor on all battery models is all bearing equipped—powered by two easily recharged, heavy duty batteries. Four models to choose from... all with Lam-Aire Dust Control: ■ MOP-32BX—32" sweeping width, self-propelled ■ MOP-32BXC—32" sweeping width, self-propelled, built-in battery charger ■ MOP-32BT—32" sweeping width (with trailer hitch) ■ MOP-41BT—41" sweeping width (with trailer hitch) ■ LAMBERT Model MOP-32BX is shown in the photograph above. Note how hood tips forward to gain easy access to batteries. Battery tray lifts out in seconds, permitting operator to install reserve batteries without loss of sweeping time.

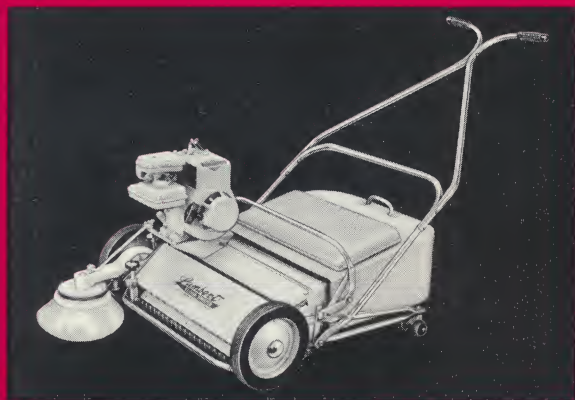

Remote Seal Control. By pulling the remote seal control lever, the front fingers lift to admit larger debris items such as cigarette packages, welding rod tips, trimmings, chips, shavings and stones. The seal to ground surface is constantly maintained so that debris and dust is forced up into the debris container, not into the air.

Sweeps Close To Obstacles. The LAMBERT Floorsweeper permits sweeping action right up to machine bases or other obstructions. Debris container is mounted out of the way at rear.

Lambert GASOLINE* MODELS

*Also Available
With Propane Power

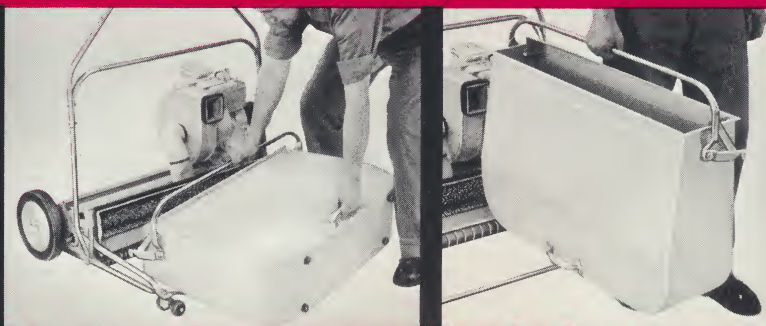

LAMBERT gasoline powered sweepers are famous for dependable performance, and are particularly well adapted for use in crowded areas, narrow aisles, indoors or out. The brushes are continuously powered for maximum sweeping efficiency in hard-to-reach areas, on both manual and self-propelled machines. The four cycle, 2½ H.P. engine is equipped with a centrifugal clutch and muffler silencer. No mixing of gas and oil is required. Maintenance is practically eliminated though all parts are readily accessible. Lambert gasoline powered sweepers are available in these models: ■ GP-32—32" sweeping width ■ GP-32B—32" sweeping width, Lam-Aire Dust Control ■ GP-32BX—32" sweeping width, Lam-Aire Dust Control, self-propelled ■ GP-41—41" sweeping width ■ GP-41B—41" sweeping width, Lam-Aire Dust Control ■ GP-41BX—41" sweeping width, Lam-Aire Dust Control, self-propelled ■ All gasoline models are also available with trailer hitch for use with tractors, industrial lift trucks, etc.

FRONT FINGERS
Air Take Up Passage Here
RIGHT SLIDE SEAL
LEFT SLIDE SEAL
REAR ROLLERS

Four Sided Lam-Aire Dust Seal* ■ Teardrop shaped front fingers swing back individually to allow debris to enter brush chamber. Axle for fingers attached to side slides. ■ Side slides move up and down on the sweeper frame to hug floor contour. ■ Rear rollers complete the seal, drop down into low spots in floor. This four sided dust seal assembly in combination with suction blower air movement is Lam-Aire dust control.

*Patent Pending

Debris Container...detaches in seconds, empties easily. Handle pivots to permit convenient carrying just like a suitcase. Flat bottom enables container to stand upright when not in use. To replace, container slips into the sturdy tubular frame, locks in with the flip of a handle.

WAREHOUSES

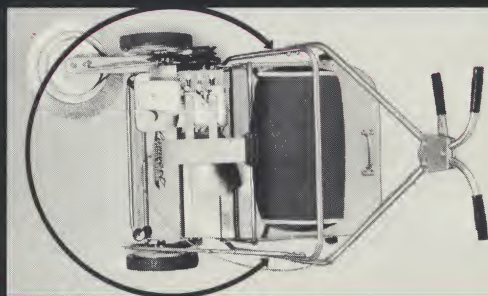

OFFICES AND LABORATORIES

Big 18" All Nylon Right Side Brush rotates constantly, even when the sweeper is stationary. It digs dirt out of corners and from under counters and moves it in front of the main brush for a cleaner sweep. A simple control raises and lowers the side brush. Left side brush optional.

Optional Trailer Sweeper. For the extra convenience of rider action, LAMBERT 3-D Powersweepers may be equipped with a tubular steel tow bar and hitch. Towing may be accomplished with tractor or riding mower. Saves work, saves time and offers easy maneuverability.

Turns In Its Own Length. Maneuvering around, under and along highly congested areas can be accomplished with finger tip pressure... the unit even turns completely around in its own length!

A *Lambert* EXCLUSIVE: LAM-AIRE DUST CONTROL

Most industrial vacuum blower machines use such tremendous air pressure that considerable amounts of dust are forced through the bag and back into the air. Unlike these machines, the revolutionary LAMBERT Powersweeper with exclusive

LAM-AIRE Dust control means clean floors...clean air!

ORDINARY Floorsweepers fill the air with choking dust...

LAM-AIRE DUST CONTROL utilizes controlled air pressure to carefully collect all dirt particles and dust-laden air as "gently as a lamb." Tests prove only clean, dirt-free air passes through the dust bag walls. An unusual seal prevents dust and dirt from being forced out the front while the constant speed, four-row brush sweeps and lifts dirt and debris into a large metal hopper. LAMBERT scientific sweeping action does a thorough floor-cleaning job while LAM-AIRE DUST CONTROL assures that the air will also remain clean. Hand sweeping scatters as it collects, strews as it piles, spreads as it sweeps. Dust flies around, escapes the broom and settles right back on the floor after sweeping.

Lambert SWEEPS CLEAN IN 1/10th OF MANUAL SWEEPING TIME

The LAMBERT Powersweeper not only sweeps 10 times faster, but collects dirt, dust and debris on wood, tile, cement, brick or asphalt floors. Where hand sweeping covers 2,000 to 3,000 square feet per hour, a LAMBERT Powersweeper can cover up to 35,000 square feet in the same amount of time — literally pays for itself in a few weeks through man hours saved! LAMBERT — the compact sweeper at a compact price — as low as \$295!

Lambert FINGER-TIP MANEUVERABILITY

So easy to handle is a LAMBERT Powersweeper that maneuvering around, under and along obstacles in highly congested areas can be accomplished with finger tip pressure. LAMBERT Powersweepers are of lightweight balanced design with ball bearing casters at the rear. Large chassis wheels provide free rolling action and turning "on a dime" with either self-propelled or manual models. Down narrow aisles, around boxes and pallets and right up to machine bases, the LAMBERT doesn't miss an inch. The constantly rotating all nylon right side brush digs into corners, moving dirt and debris in front of the main chassis brush. Debris container is mounted at the rear, out of the way. In large areas the LAMBERT supplements a big rider operated sweeper — cleans narrow aisles and congested areas, etc. — does the job that other machines can't do!
